Project Design Phase-II: Solution Requirements

Field	Details
Date	25 October 2026
Team ID	N/A (Individual Project)
Project Name	Electric Vehicle Market Performance & Insights
Maximum Marks	4 Marks

Functional Requirements

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority
1	Data Access & Integration	Import and connect the global EV market dataset (CSV/Excel) containing sales volumes, pricing, and battery chemistries into Tableau.	High
2	Data Processing	Clean anomalies, handle null values, assign geographic roles to region fields, and correct data types for precise analysis.	High
3	Business Analysis	Use calculated fields to compute Executive KPIs: Total Sales, Average Price, Median Range, and OEM market share percentages.	High
4	Business Insights & Outputs	Build a 3×3 interactive dashboard and a 6-part Tableau Story mapping macro market trends to technical battery performance.	High
5	User Interaction & Analysis	Enable dashboard filters (by Region, Battery Type, and Segment) so stakeholders can drill down from global to OEM-specific data.	High
6	Data Update & Reporting	Allow the project to be saved locally (.twbx) and published	Medium

.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)	Priority
		online to Tableau Public for web-based stakeholder review.	

Non-functional Requirements

NFR No.	Non-Functional Requirement	Description
NFR-1	Usability	Dashboard must have a clean 3×3 layout, professional fonts (e.g., Tableau Bold), and intuitive color coding for executive-level readability.
NFR-2	Security	Published workbooks will utilize open/public data, ensuring no sensitive PII or confidential corporate data is exposed on the web.
NFR-3	Reliability	Calculations and aggregations must consistently reflect 100% accurate results based on the underlying dataset without errors.
NFR-4	Performance	The published interactive dashboard and story points should render and filter within 3-5 seconds in a standard web browser.
NFR-5	Availability	The final visualization must be hosted on Tableau Public, ensuring 24/7 web availability for users globally via a simple link.
NFR-6	Scalability	The Tableau workbook architecture must be flexible enough to easily incorporate future datasets (e.g., next year's EV sales) with minimal redesign.
