# Scalability & Future Plan

| Field | Details |
|---|---|
| **Date** | 26 October 2026 |
| **Team ID** | N/A (Individual Project) |
| **Project Name** | Electric Vehicle Market Performance & Insights |
| **Maximum Marks** | 1 Mark |

## Future Expansion Phases

| Phase | Title | Description |
|---|---|---|
| **Phase 1** | **Current State (Tableau Public + CSV)** | The current deployment utilizes static CSV/Excel extracts published to Tableau Public. It successfully demonstrates the core visualizations, 3×3 dashboard, and KPI tracking for executive stakeholders. |
| **Phase 2** | **Live Database Integration** | Transition from static CSV files to a live database connection (e.g., AWS RDS, PostgreSQL, or SQL Server). This will allow the dashboard to update automatically in real-time as new global EV sales data is ingested. |
| **Phase 3** | **Dataset Expansion & Infrastructure** | Expand the underlying dataset to include external factors that impact EV sales, such as regional charging station infrastructure availability, government EV incentives, and |

| | | global lithium supply chain costs. |
| **Phase 4** | **Predictive Analytics & Forecasting** | Integrate Tableau's advanced predictive modeling or connect to Python/R scripts to forecast future EV sales volume, battery chemistry adoption rates, and price-to-range trajectories based on historical trends. |
